

SRS OVERVIEW - UBER

Presented by Petra Sartori, Student ID:
23324986

Video: https://drive.google.com/file/d/1HoFKlh-PCBPVYYsuynewqGTdLzkPYhKj/view?usp=drive_link

INTRODUCTION

- Relevant Stakeholder: Client Team End User
- Drivers and Passengers
- How will Uber serve them?

USE CASE MODEL

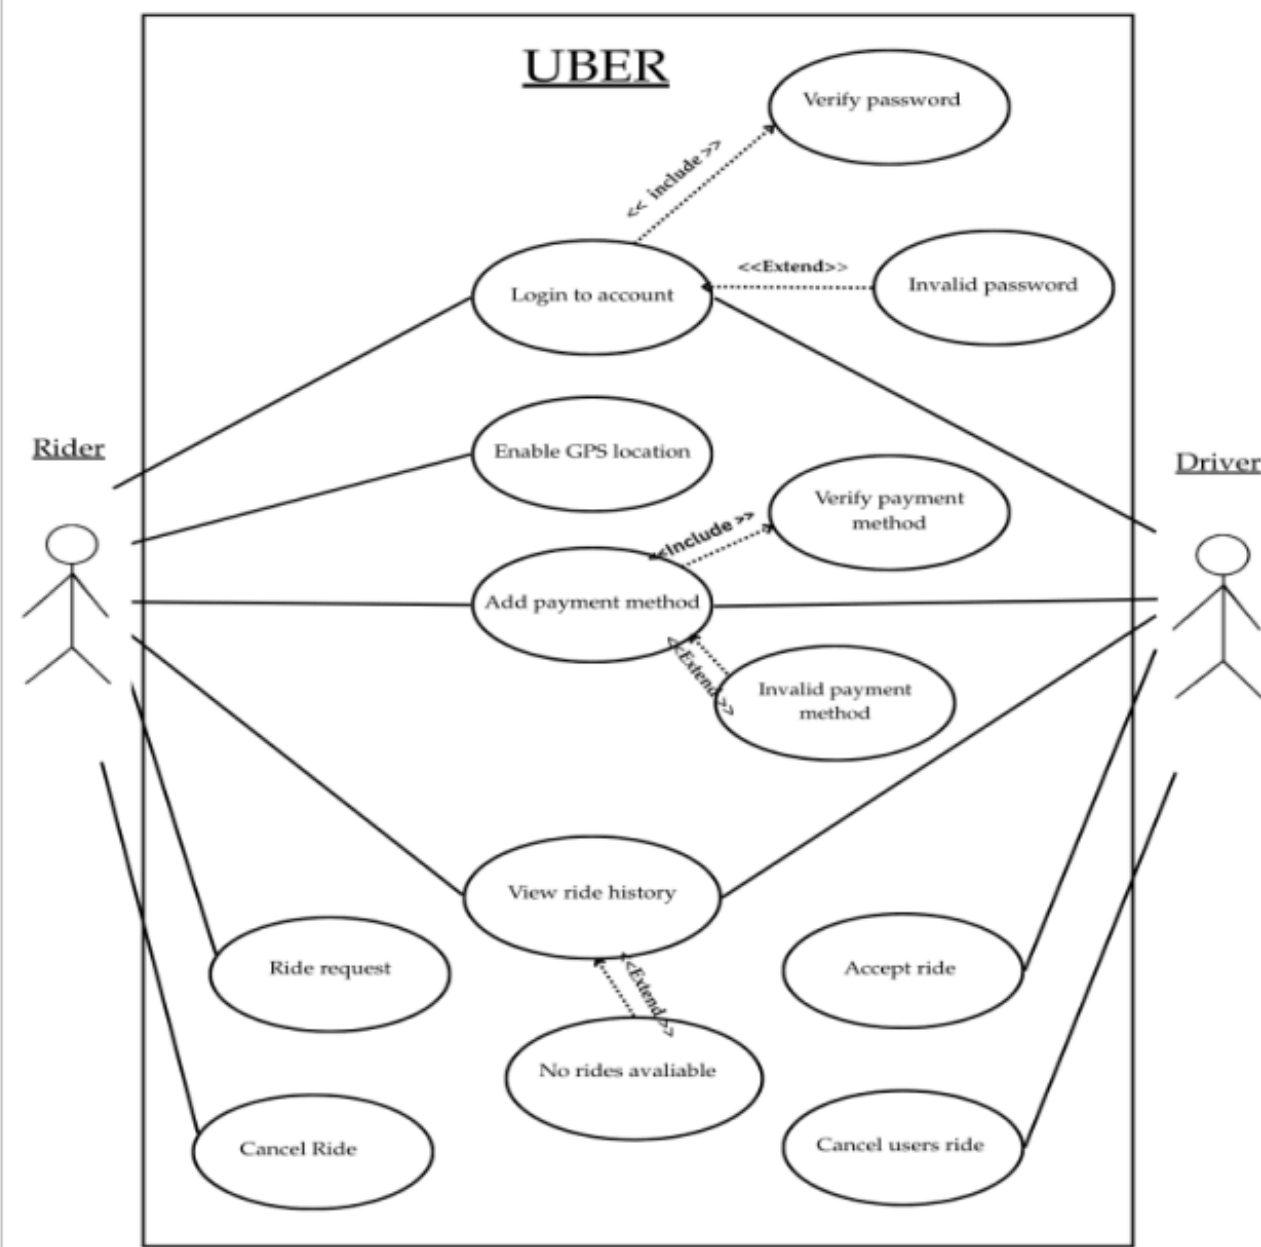

Fig. 3.2 Use Case Model

- How do users interact with the system?
- Which action belongs to which user?
- Shared: account login, ride history, payment method...

RICH PICTURE

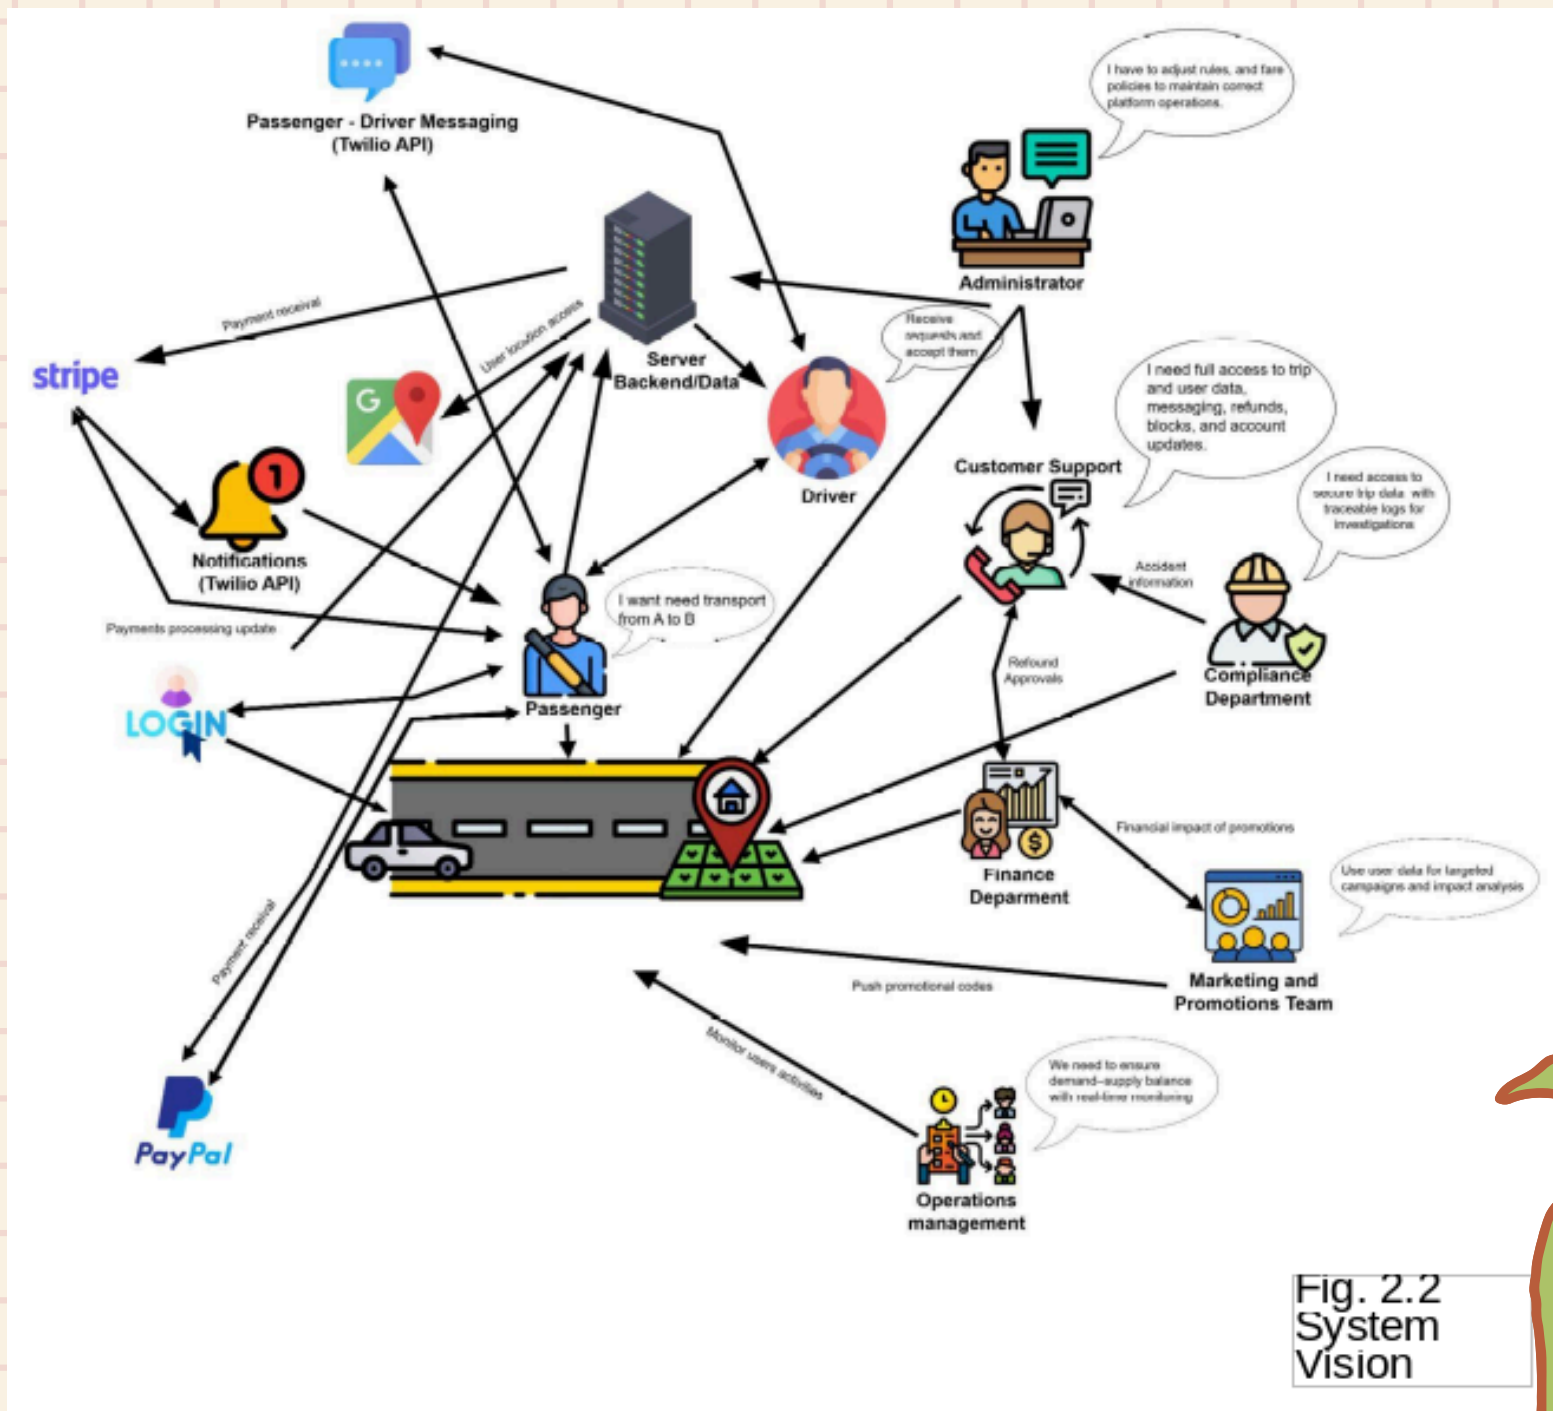

Fig. 2.2
System
Vision

- How the system fits into user's environment?
- Passenger transportation as core of the system.
- Connection between user and third-party services of the system

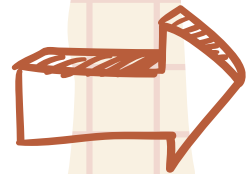

KEY REQUIREMENTS

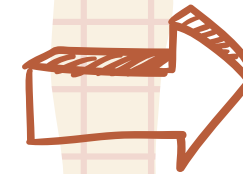

Core functions

- Creating Accounts
- Requesting rides
- Clear communication
- Secure payments
- Trip history

Performance

- Login screens < 3 seconds
- Ride requests < 10 seconds
- GPS updates in real time

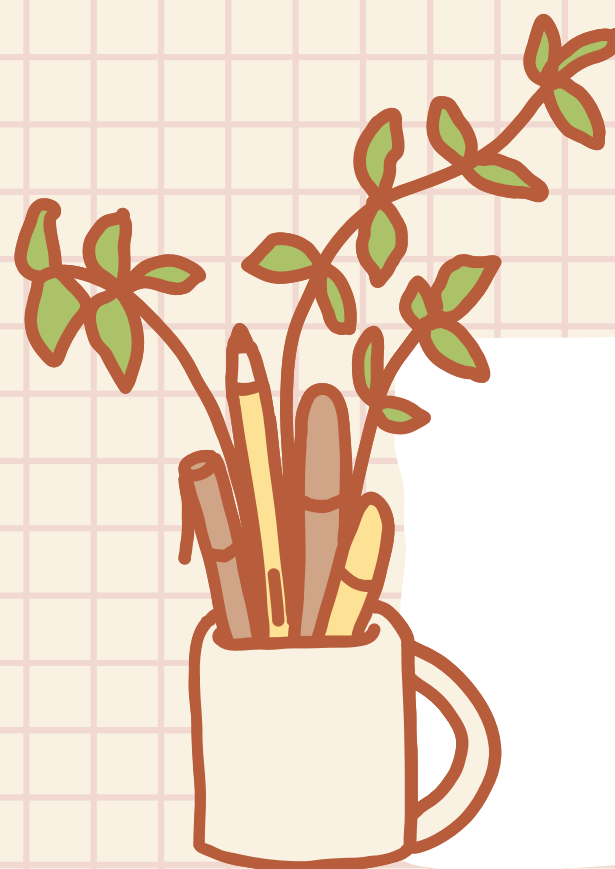

Security

- Users must be verified
- Protection of sensitive data

CLARIFICATION QUESTIONS

1. Which of the mentioned requirements should we focus on the most?
2. Should the interface be simple or detailed, providing more control?
3. Which safety feature is the most important?

REFLECTION

Strengths

- Academic writing
- Description of each concept
- Examples provided
- Sources

Weaknesses

- Final look of the Goal Model Diagram
- Specific language of system requirements and constraints

MOST DIFFICULT PART

Making a Goal Model diagram:

- Formatting
- Coming up with goals
- Business, Usage, System

Overcoming
challenges:

- Developing skills
on draw.io
- Doing research
- Looking over
examples

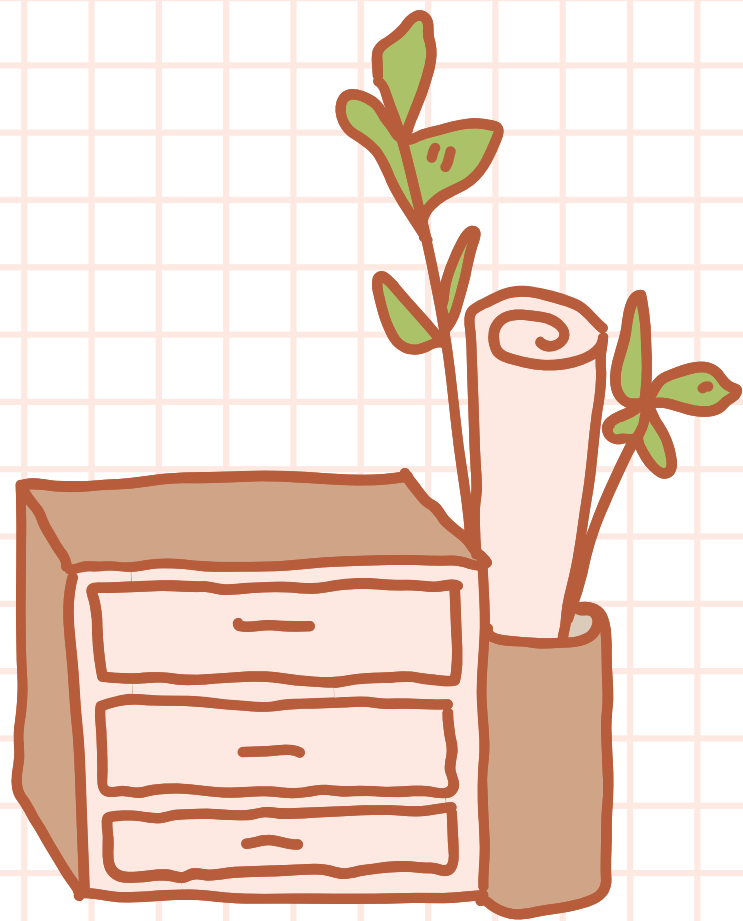

MOST USEFUL PART

- System requirements
- System constraints

- Important for my future career
- Helpful for the best software design

WHAT TO DO DIFFERENTLY NEXT TIME...

Everything we do is a
learning experience!

Now I know what to focus
on next time.

1. Study concepts
beforehand

2. Practice a specific
diagram style

3. Do more research

THANK YOU!
