

# CSC1005/CSC1022 Database Lab

## Lab 6: SQL Joins and ANY/ALL

**Goal:** Practice miscellaneous SQL queries and try out EXISTS, LIMIT clauses.

**You have finished the lab when you have finished all queries.**

### Section 1. Basketball (Make default database)

1. Return the max height among the players playing with 'Chicago Bulls' in the year 1998.  
(Hint: you need to join three columns. Use players\_teams.year to filter the requested year)

2. Return the average height for each team in the year 1998, ordered from the highest to the lowest.

(Hint: Similar to the previous query. In addition, you need to group by the name of the teams and to order them)

### Section 2: Sakila (Make Sakila the default database)

3. Find all actors who have appeared in at least one film. (Use **EXISTS** keyword)
4. Count the number of movies belonging to the '**Action**' category

### Section 3. World (Make default database)

5. Return a table with the name of the country and the average population of its cities.
6. List the top 10 most used languages, the number of countries which speak the language and total amount of people who speak this language (not the percent). Order the results by the total number of people who speak these languages from highest to lowest.

(Hint: Use LIMIT to display only 10 and think how to convert percentages into absolute)
