

CSC1005/CSC1022 Database CA4

Mock Exam

This is a Mock Exam with questions of similar difficulty levels as the original exam to be held on 10th April. You should familiarise yourself with the format and try to complete the questions within the duration given.

Do not use any external help, AI chat bots or LLM's as during the exam you won't have access to the internet. You have to use **MySQL Workbench** for writing the queries. So you should practice on that.

Duration: 1 Hour

Section 1. Basketball (Make default database)

1. Return the ID and the number of wins for the coach who was awarded 'NBA Coach of the Year' in the year 2000. [Hint: You should make use of awards_coaches table]
2. Find the number of points and the team containing 'Los Angeles' in its name who have scored in all the seasons a number of points higher than the number of points scored by all the teams containing 'Philadelphia' in their name.

[Hint: Join and nested queries with an aggregate function for determining how many points have scored by the teams with Philadelphia' in their name]

Section 2. World (Make default database)

3. For each country in North America show the name of the capital, the population of the capital, the name of the country and the official language(s). [Hint: Three joins (it is possible to obtain more than one row for each city)]
4. What monarch (of any type) is the head of state over the greatest number of cities? Return the top three results.

Section 3. Sakila (Make default database)

5. Return the email of the customers who have spent in total an amount more than 120 euro, with an average spent greater than 5 euro and a number of transaction between 28 and 35 (excluded). [Hint: Use of payment table]
6. Find a list of all films that contained the word "Airport" along with the names of the actors that appeared in those films, ordered by last name.
